Vintage

Excellent winter rains and late rains into spring ensured good moisture content in the soil with the onset of the growing season. The prolonged cool spring weather meant that bud burst was about two weeks later than normal and slightly uneven. The subsequent moderate to cool weather during flowering and berry set continued into the rest of the growing season. The much cooler than normal growing season meant that we started harvest two weeks later than normal. The cool weather also persisted through the harvest period leading to not only exceptional acidity in the grapes and wine but the best acid balance ever seen in our grapes and wine. We are really pleased with the season and look forward to sharing the wines we have made with you in the coming months and years.
